# People

Purpose

The People data-table holds data for people, farmers, and staff KKFU work with. It is a **master data-table** which links to other data-tables: Farmers and Staff. Each Person record includes a "SocietiesID" to link the record to the main data-entities of KKSys.

The People data-table includes data-fields for the basic descriptions of a person at the most simple level: data-fields such as "FirstName" and "DateOfBirth." More complex fields are generally added to the linked data-tables Farmers and Staff so avoid duplication.

A full listing of **all** the fields in the data-table with their purposes and any automation built into the App is laid out below. To fully understand the purpose of the data-fields please consult this.

How and where to access People data

The image below shows the "People" Edit Form. This is accessed via its own entry in the System Entities screen. People are a **child** of the **Societies** entity.

KKSys People Edit Form
